Plugin Development

- Joey Kudish

http://slides.jkudish.com

About me

- WordPress developer since 2007
- Initially built sites for a variety of clients + plugin development
- Code Wrangler at WordPress.com / Automattic since May 2012
- Originally from Montreal, moved to Vancouver in 2011

kurgo

What's a plugin?

A plugin extends or modifies WordPress to do something it didn’t previously do

Themes can act as plugins. Oh and there's mu-plugins too.

Jetpack by WordPress.com

Supercharge your WordPress site with powerful features previously only available to WordPress.com users.

Download Version 2.1.1

Description | Installation | FAQ | Screenshots | Changelog | Stats | Support | Reviews | Developers

Jetpack is a WordPress plugin that supercharges your self-hosted WordPress site with the awesome cloud power of WordPress.com.

For more information, check out Jetpack.me.

Features include:

- Simple, concise stats with no additional load on your server. Previously provided by WordPress.com Stats.
- Email subscriptions for your blog's posts and your post's comments.
- Social networking enabled comment system.
- Monitor and manage your site's activity with Notifications in your Toolbar and on WordPress.com.
- Simple, Akismet-backed contact forms.
- The WP.me URL shortener.
- Hovercard popups for your commenters via Gravatar.
- Easily embedded media from popular sites like YouTube, Digg, and Vimeo.
- The ability to post to your blog from any email client.
- Integration with and automatic posting to your favorite social networks including Twitter, Facebook, Tumblr, and LinkedIn.
- For the Math geeks, a simple way to include beautiful mathematical expressions on your site.
- A widget for displaying recent tweets. Previously provided by Wickett Twitter Widget
- Your readers can easily share your posts via email or their favorite social networks. Previously provided by the Sharedaddy WordPress plugin.
- Your writing will improve thanks to After the Deadline, an artificial intelligence based spell, style, and grammar checker. Previously provided by the After the Deadline WordPress plugin.
- With Carousel active, any standard WordPress galleries you have embedded in posts or pages will launch a gorgeous full-screen photo browsing experience with comments and EXIF metadata.
- A CSS editor that lets you customize your site design without modifying your theme.
- A mobile theme that automatically streamlines your site for visitors on mobile devices.
- Mobile push notifications for new comments via WordPress mobile apps.
- The ability to allow applications to securely authenticate and access your site with your permission.
- Creative formats for your image galleries: mosaic, circles, squares, and a slideshow view.
- and *many* more to come!

Plugins can be huge...

Character Count Excerpt

Generate automated excerpts using character count instead of word count. New Reading setting to specify length.

Download Version 1.0

Description | Installation | Stats | Support | Reviews | Developers

By default, WordPress trims excerpts by word count (55 words by default). This plug-in allows you to trim by a maximum character count instead. All of the usual filters apply; developers can also modify the character count using a new

```
character_count_excerpt_length
```

filter. Non-developers can now easily change the excerpt length using a new option on the Reading settings pages.

The default character length is 300.

Tags: character count, excerpt, tr.im

Requires: 3.0 or higher
Compatible up to: 3.2.1

What's in a plugin?

```php
<?php
/*
Plugin Name: WordCamp Winnipeg demo plugin
Plugin URI: http://2013.winnipeg.wordcamp.org
Description: This plugin will demonstrate how to build plugins
Version: 0.1
Author: Joey Kudish
Author URI: http://jkudish.com/
License: GPLv2
*/

/* some code goes here... */
```

Where does it go?

wp-content/plugins/[plugin_name]
or wp-content/mu-plugins/

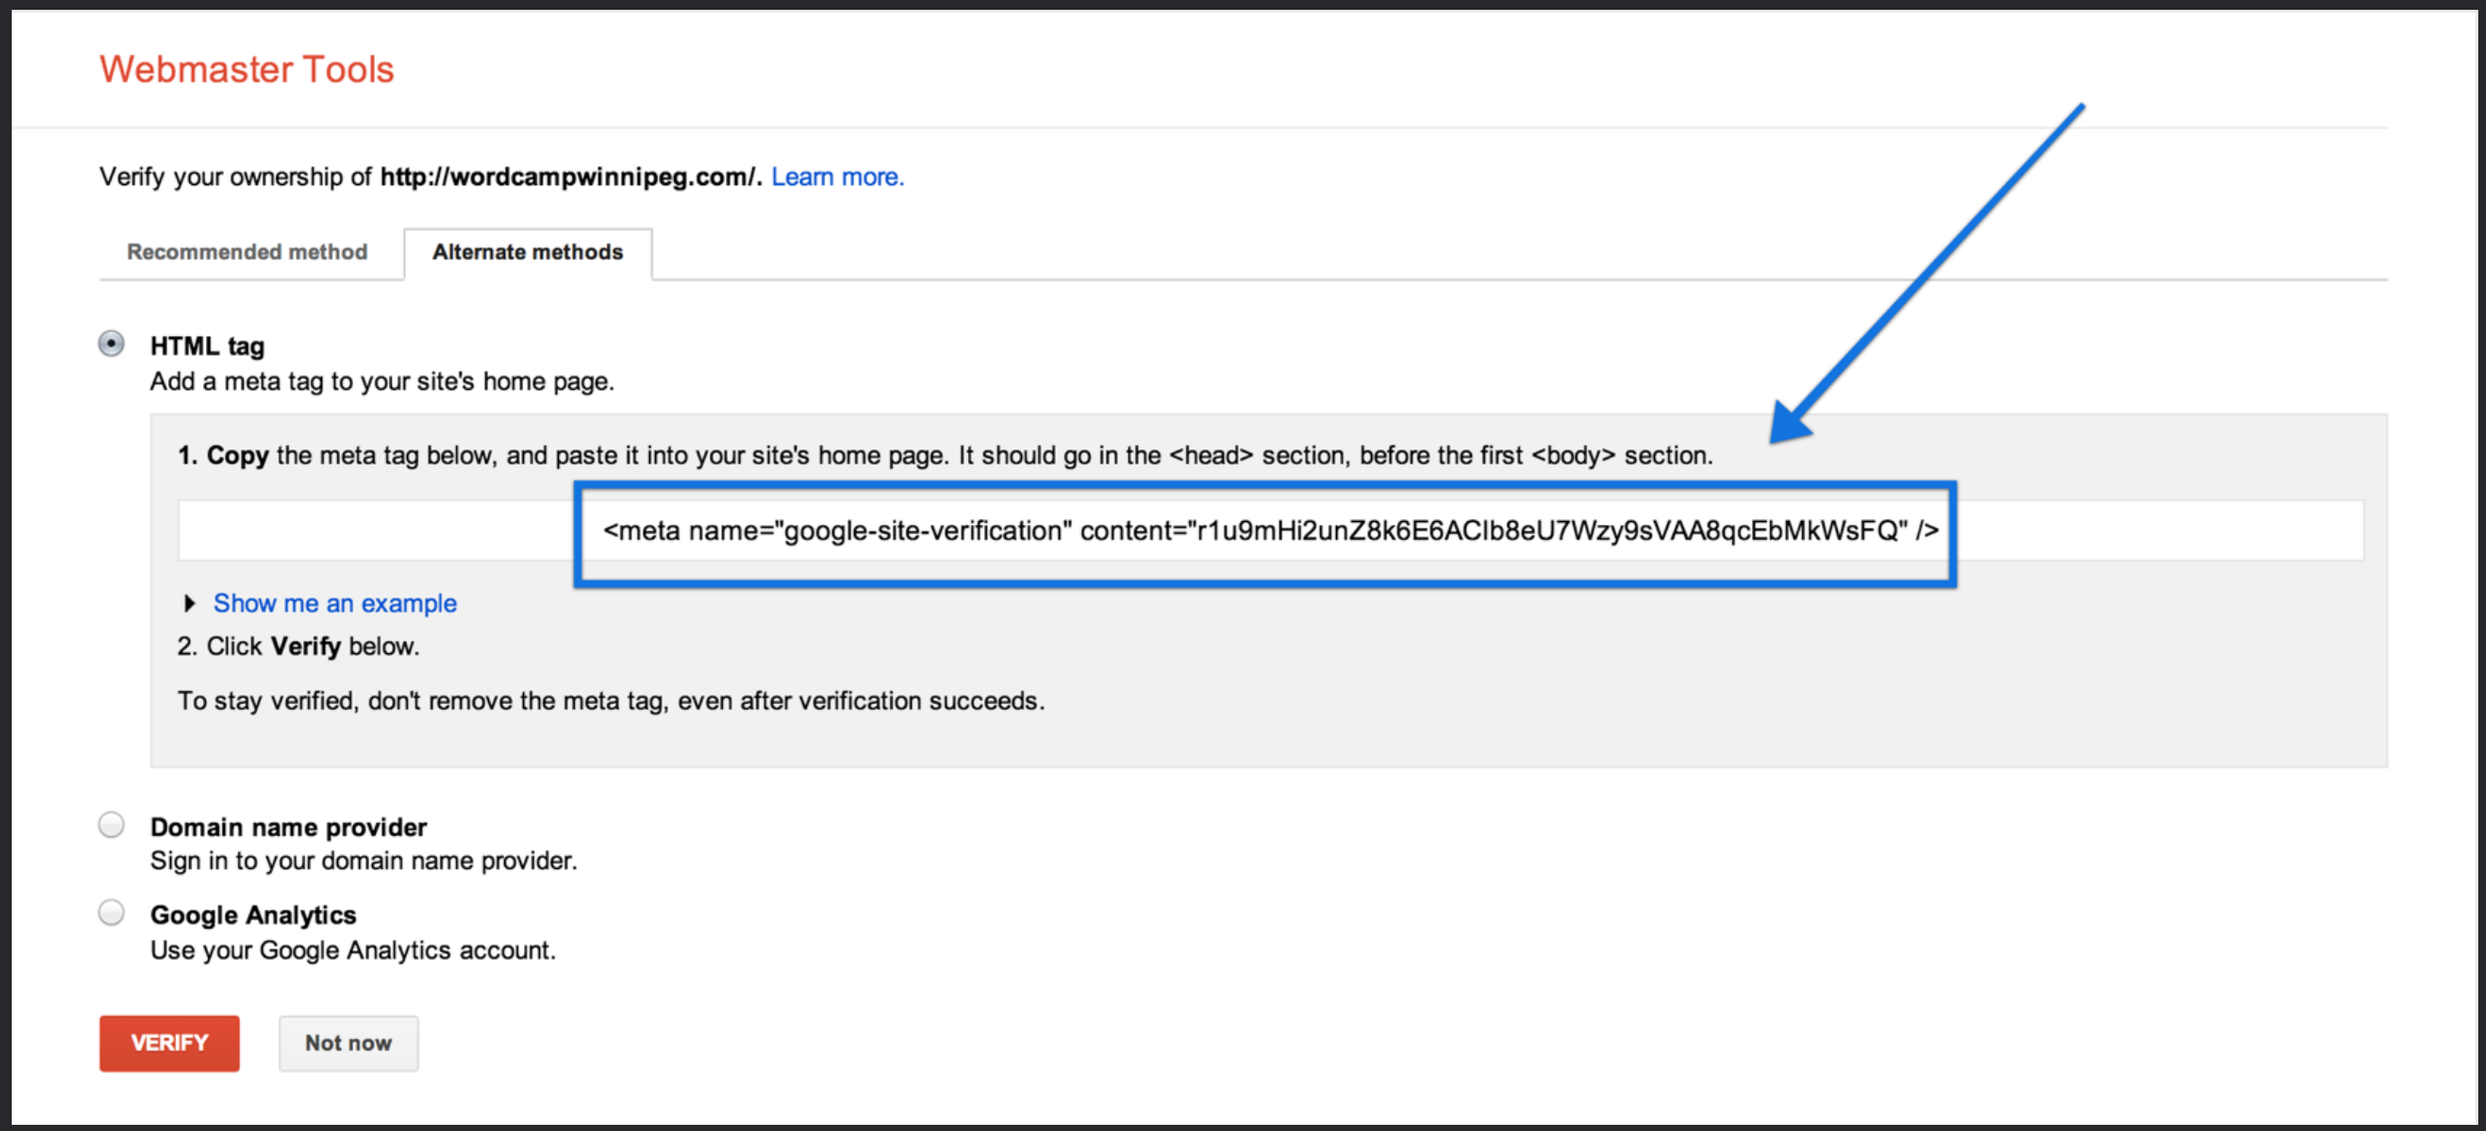
In order to “hook” into WordPress, we use action and filter hooks

Action hooks allow you to add your own code to WordPress' call stack

Filter hooks allow you to modify an existing variable or piece of information

Demo time

Let’s add Google Webmaster Tools verification to our site



```php
<?php
/*
Plugin Name: WordCamp Winnipeg Add Meta Tag
Plugin URI: http://2013.winnipeg.wordcamp.org
Description: Adds Google Webmaster tools verification to your site
Version: 0.1
Author: Joey Kudish
Author URI: http://jkudish.com/
License: GPLv2
*/

add_action( 'wp_head', 'wcwpg_add_meta_tag' );
function wcwpg_add_meta_tag(){
    echo '<meta name="google-site-verification"
        content="r1u9mHi2unZ8k6E6ACIb8eU7Wzy9sVAA8qcEbMkWsFQ" />';
}
```

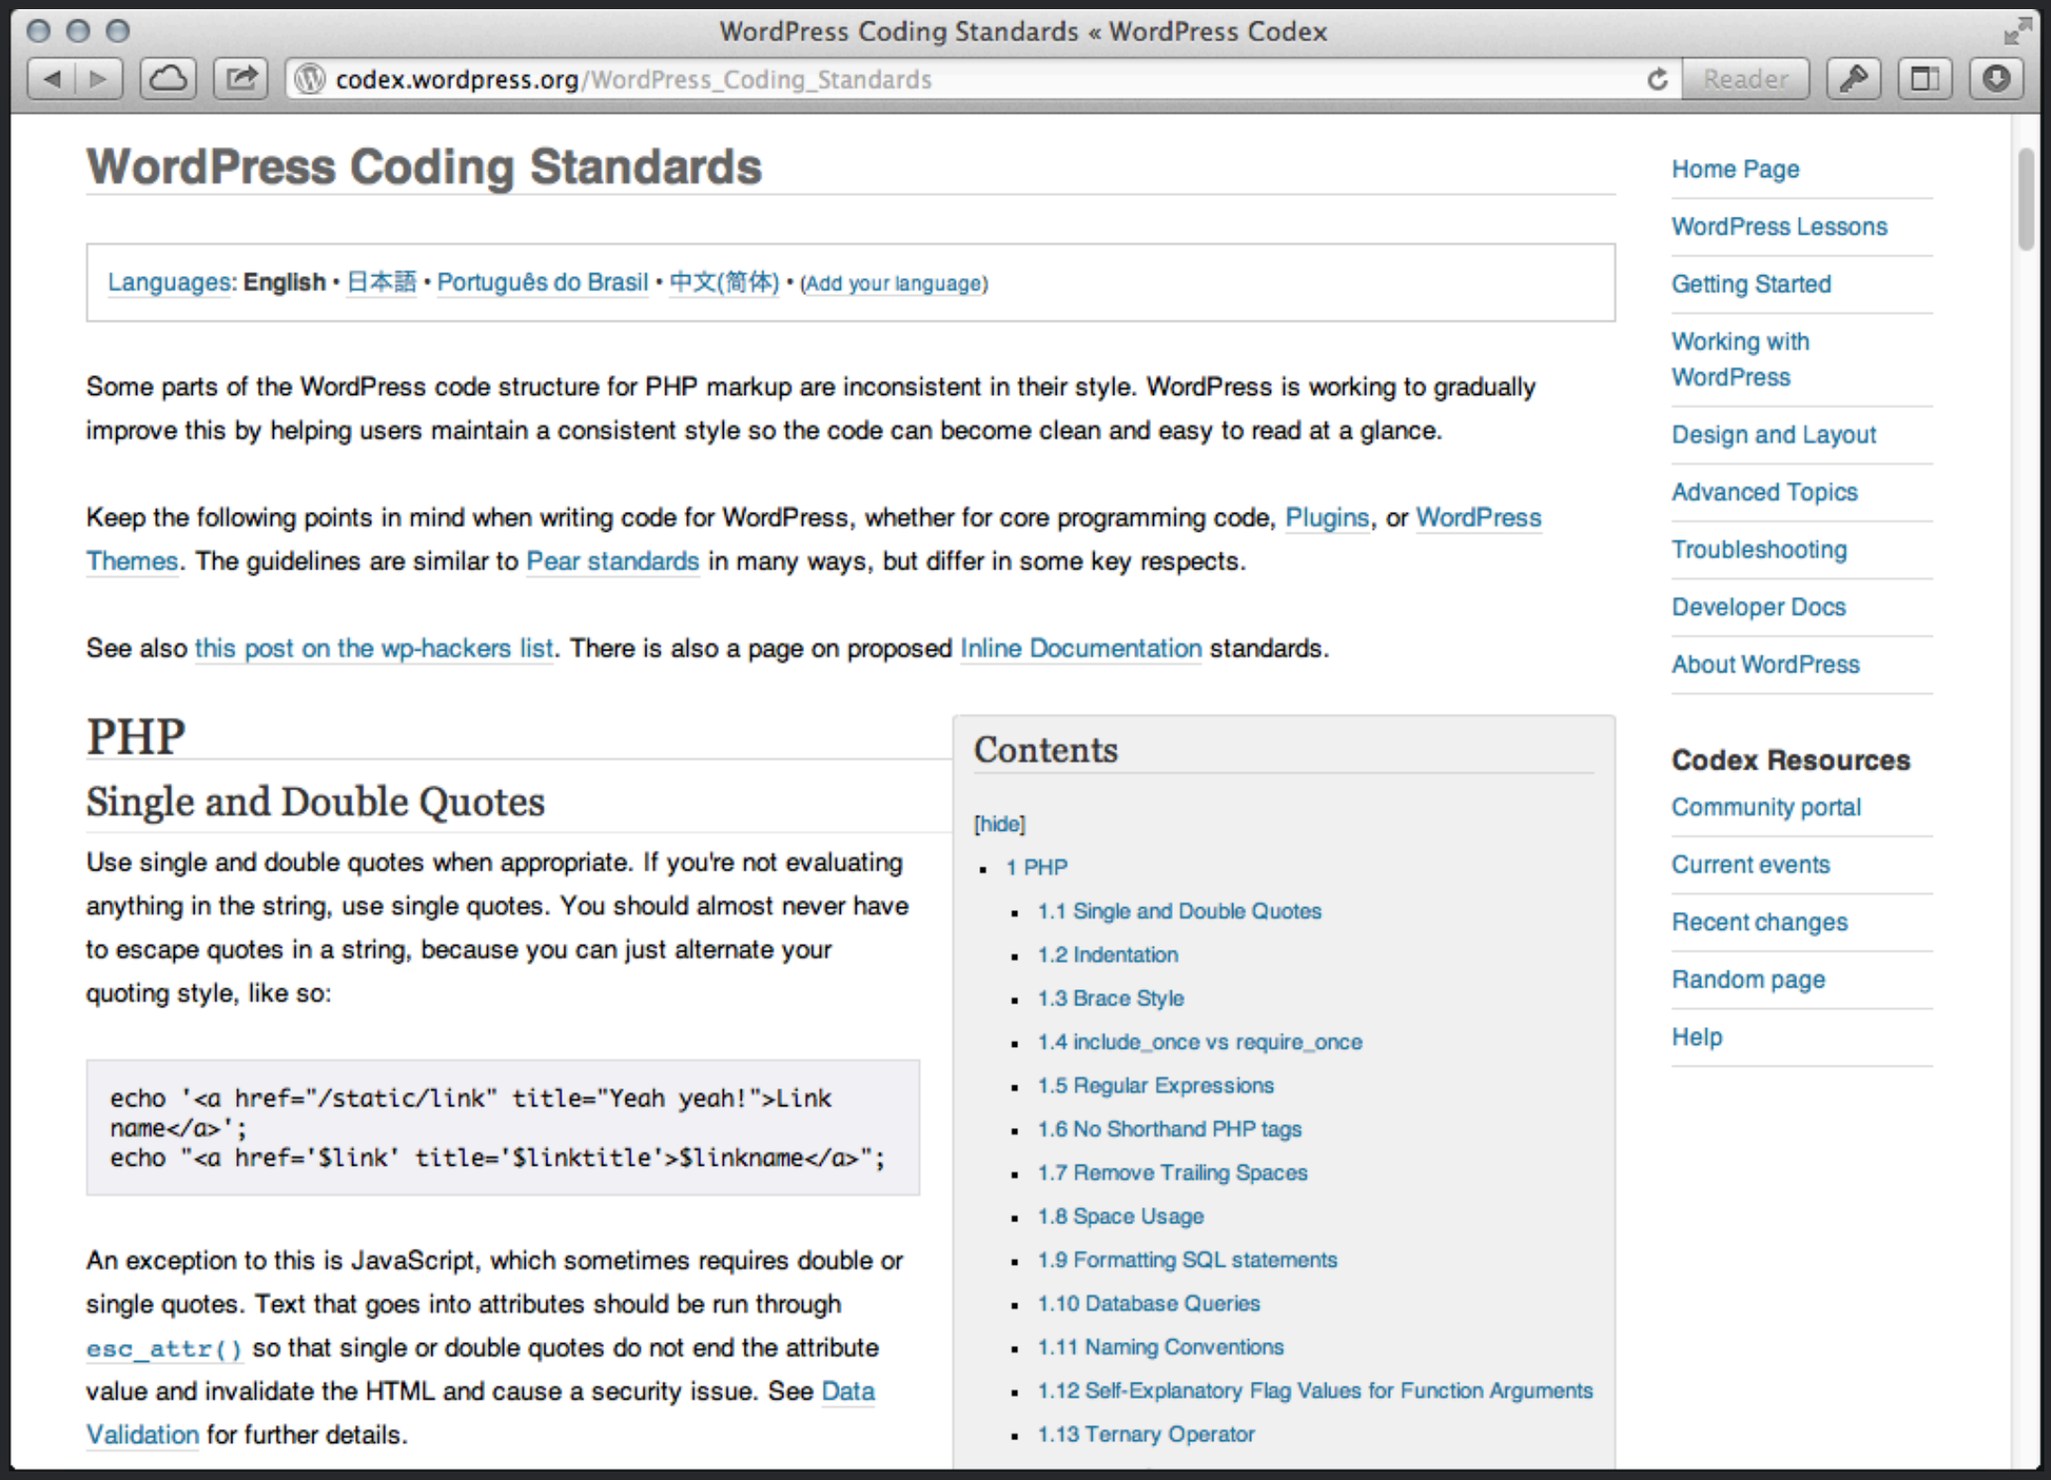
Finding hooks

- The best way is to get to know/search core (use an IDE or a command line tool like ack)
- WordPress.org Codex (http://codex.wordpress.org/)
- http://adambrown.info/p/wp_hooks
- Debug Bar + Debug Bar Action Hooks plugin (http://wordpress.org/extend/plugins/debug-bar-action-hooks/)

Some pro tips

Use built-in APIs, don’t re-invent the wheel

Use WordPress coding standards



Be nice to other devs.
and to your users
Namespace your classes and functions.
Leave hooks for others.

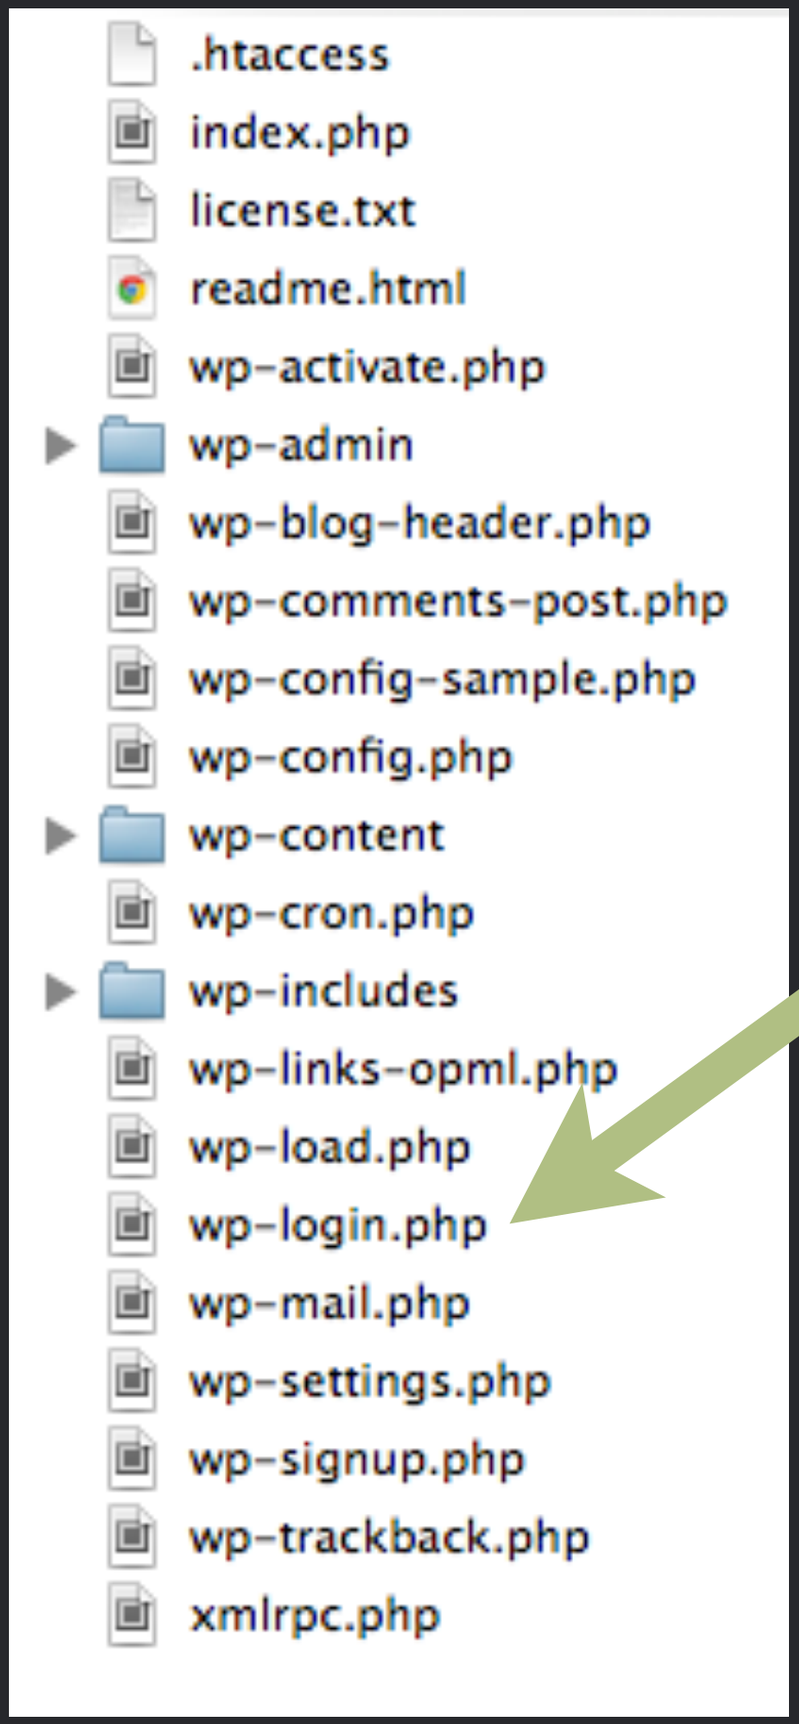
Winnipeg's very first WordCamp is here and it's happening on June 1st, 2013 at the downtown campus of Red River Community College (160 Princess St). Are you excited? We are!

We have a great schedule with expert WordPress developers and users. It'll be an amazing time. Make sure you get your tickets now because we only have room for so many people. See you there!



hey that's the file we want to hook into

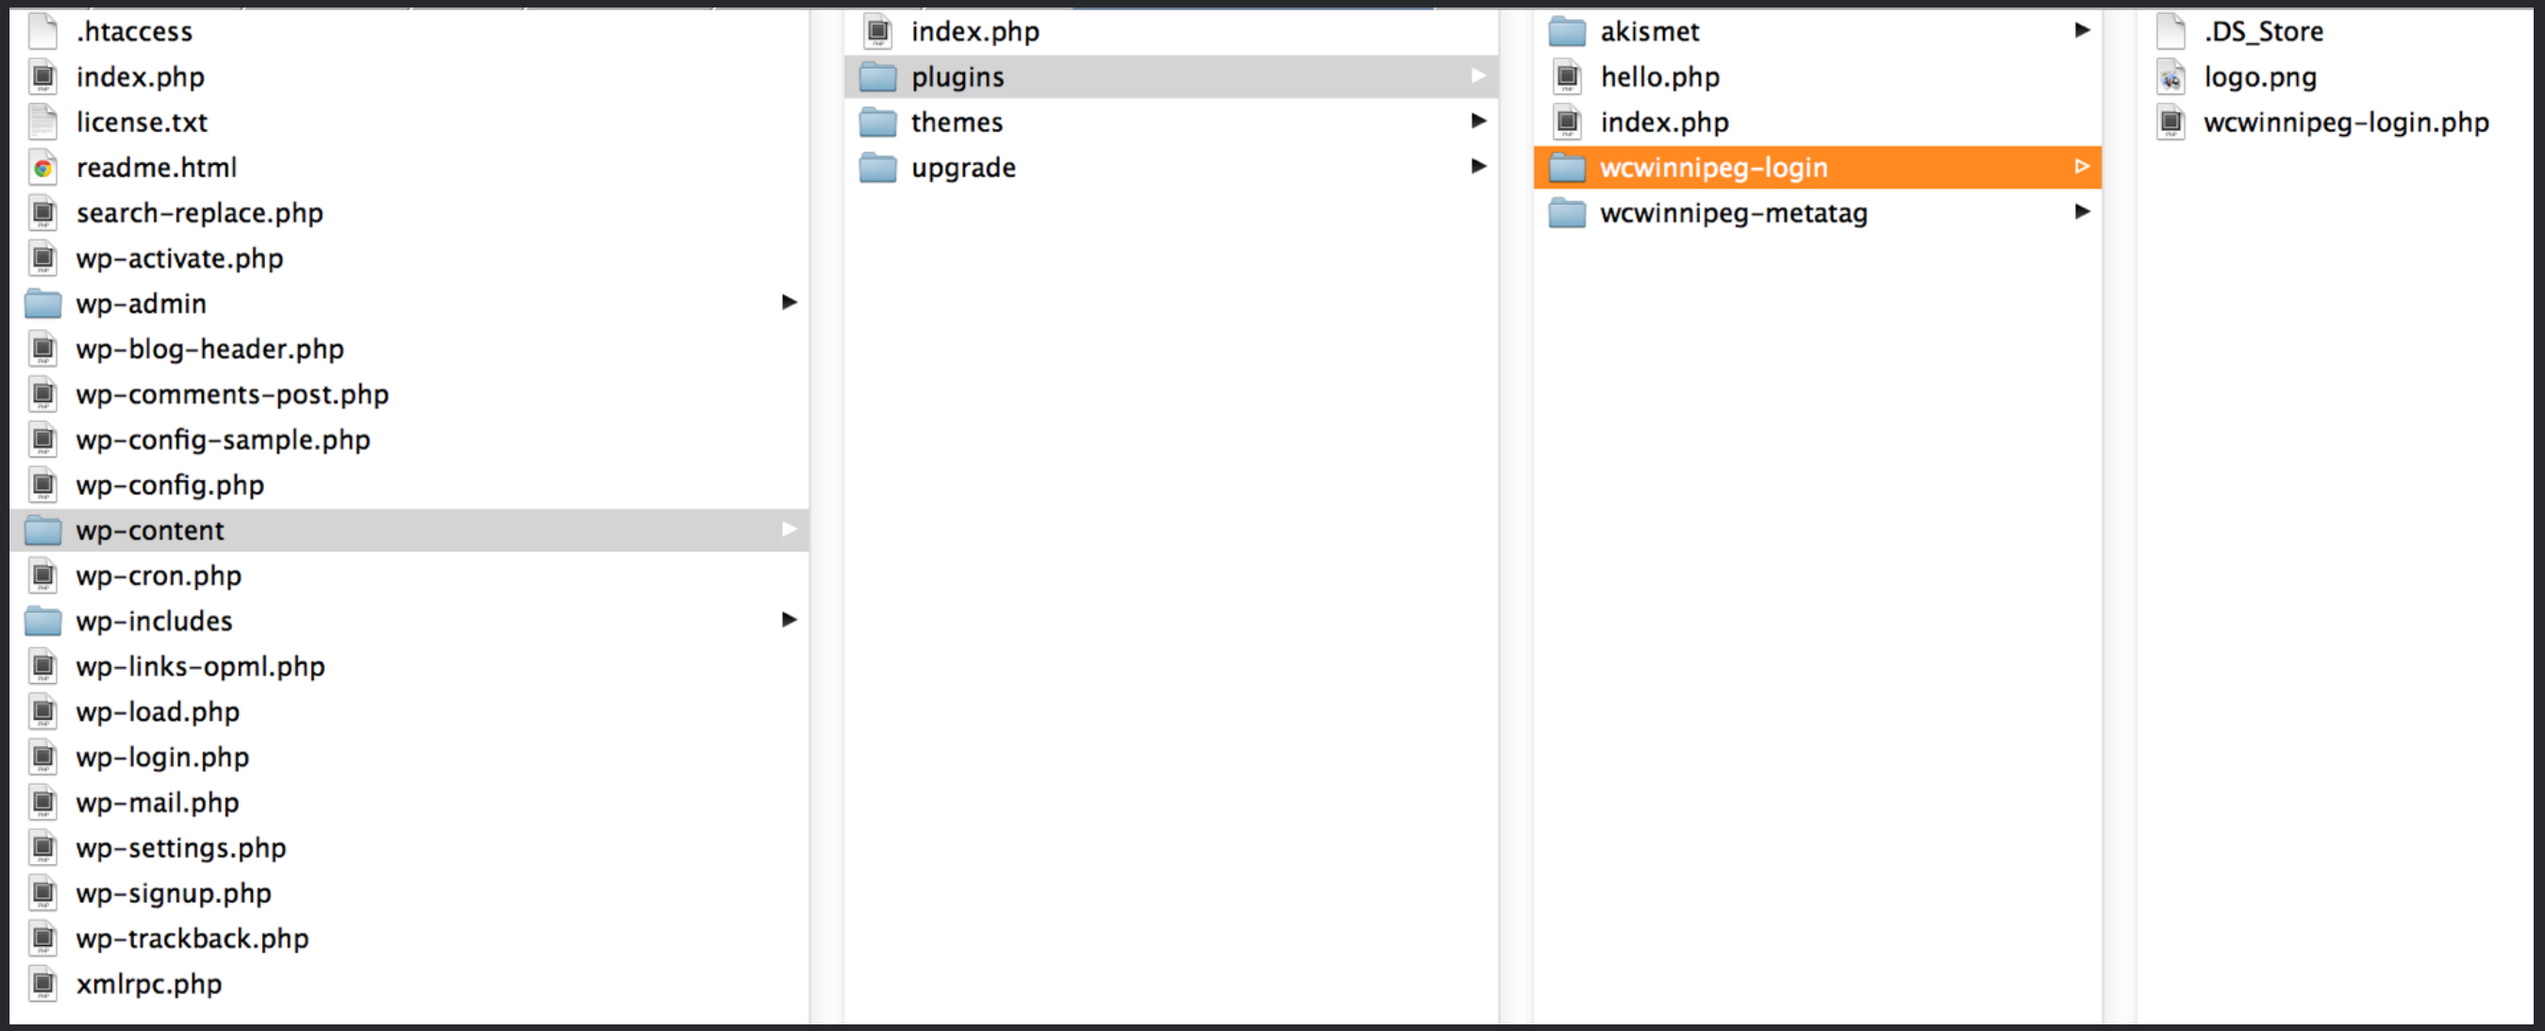
wp-login.php

```
25  /**
26   * Outputs the header for the Login page.
27   *
28   * @uses do_action() Calls the 'login_head' for outputting HTML in the Log In
29   *       header.
30   * @uses apply_filters() Calls 'login_headerurl' for the top login link.
31   * @uses apply_filters() Calls 'login_headertitle' for the top login title.
32   * @uses apply_filters() Calls 'login_message' on the message to display in the
33   *       header.
34   * @uses $error The error global, which is checked for displaying errors.
35   *
36   * @param string $title Optional. WordPress Log In Page title to display in
37   *       <title/> element.
38   * @param string $message Optional. Message to display in header.
39   * @param WP_Error $wp_error Optional. WordPress Error Object
40   */
41  function login_header($title = 'Log In', $message = '', $wp_error = '') {
```

```
70
71      do_action( 'login_enqueue_scripts' );
72      do_action( 'login_head' );
73
```

```
73
74      if ( is_multisite() ) {
75          $login_header_url   = network_home_url();
76          $login_header_title = $current_site->site_name;
77      } else {
78          $login_header_url   = __( 'http://wordpress.org/' );
79          $login_header_title = __( 'Powered by WordPress' );
80      }
81
82      $login_header_url   = apply_filters( 'login_headerurl',   $login_header_url   );
83      $login_header_title = apply_filters( 'login_headertitle', $login_header_title );
84
```

Let's create our plugin



```php
<?php
/*
Plugin Name: WordCamp Winnipeg Custom Login Page
Plugin URI: http://2013.winnipeg.wordcamp.org
Description: Customize the wp-login.php page
Version: 0.1
Author: Joey Kudish
Author URI: http://jkudish.com/
License: GPLv2
*/
```

License: GPLv2
*/

function wcwpg_login_head() {
    ?>
    <style>
    #login h1 a {
        background-image : url( '<?php echo plugins_url( 'logo.png', __FILE__ ); ?>' );
        background-size: 100%;
        margin-bottom: 20px;
    }
    </style>
    <?php
}
add_action( 'login_head', 'wcwpg_login_head' );

function wpg_login_url( $url ) {
    $url = home_url();
    return $url;
}
add_filter( 'login_headerurl', 'wpg_login_url' );
```

A few words on Security

Don’t trust users

Sanitize input; escape output

http://codex.wordpress.org/Data_Validation

Protect users from malicious attacks; use nonces to validate user actions

http://codex.wordpress.org/WordPress_Nonces

Use the built-in APIs and functions unless you absolutely can’t. Keep re-usability in mind and avoid custom tables if possible.

Custom Metadata Manager

An easy way to add custom fields to your object types (post, pages, custom post types, users)

Download Version 0.7.1

❤ Favorited

Description Installation FAQ Screenshots Other Notes Changelog Stats Support Reviews Developers

An easy way to add custom fields to your object types (post, pages, custom post types, users) & to generate option pages.

The goal of this plugin is to help you rapidly build familiar, intuitive interfaces for your users in a very WordPress-native way.

The custom field panel is nice, but not quite the easiest thing for users to work with. Adding your own metaboxes and fields involves a lot of time and repetitive code that could be better used elsewhere.

This plugin handles all that heavy-lifting for you behind-the-scenes, so that you can focus on more on building out and connecting your data rather than all the minor details. This single piece of code `x_add_metadata_field( 'my-field-name', 'post' );` generates a metabox with a text field inside it, with the necessary hooks to save the entered values.

The API is similar to that used for registering custom post types and taxonomies so it should be familiar territory.

NOTE: The plugin now requires WordPress 3.3+ (chiefly for the wysiwyg & datepicker fields)

Like what you see? Want more field types and features added? Get in touch or contribute on github

> *See "Other Notes" section for usage information*

WordPress can host your plugin

You've got a cool new plugin and are hoping to give it some exposure. You're in the right place. Just ask us to host it for you. You'll be able to:

1. Keep track of how many people have downloaded it.
2. Let people leave comments about your plugin.
3. Get your plugin rated against all the other cool WordPress plugins.
4. Give your plugin lots of exposure in this centralized repository.

There are only a few restrictions

1. Your plugin must be compatible with the GNU General Public License v2, or any later version. We strongly recommend using the same license as WordPress — "GPLv2 or later."
2. The plugin must not do anything illegal, or be morally offensive (that's subjective, we know).
3. You have to actually use the Subversion repository we give you in order for your plugin to show up on this site. The WordPress Plugins Directory is a hosting site, not a listing site.
4. The plugin must not embed external links on the public site (like a "powered by" link) without explicitly asking the user's permission.
5. If you don't specify a compatible license, what you check in is considered GPLv2 or later.
6. We also have a large list of detailed guidelines, but mostly they say how not to be a spammer.

It's pretty simple

1. Sign up.
2. Within some vaguely defined amount of time, your plugin will be manually reviewed. You may be emailed and asked to provide more information.
3. Once approved, you'll then have access to a Subversion Repository where you'll store your plugin.
4. Once you put your plugin (and a readme file!) in that repository, it will shortly be automatically entered into the plugins browser.
5. Check out the FAQ **for more information**.

Readme files

To make your entry in the plugin browser most useful, each plugin should have a readme file named `readme.txt` that adheres to the WordPress plugin readme file standard. You can put your readme file through the readme validator to check it.

GPL and the Repository

All plugins hosted in the WordPress.org repository must be compatible with GPLv2 or later. That means all code that is on our servers, from images to CSS to JS to the PHP code, has to meet that requirement. This is an extra requirement than just the standard one of derivative code, but we strongly feel that proprietary content has no need to be in our repository. If your code needs to be split licensed, or you have to included proprietary code for any reason, we can't host you on .org, but that has no bearing on how neat and cool your code might be.

For a list of various licenses, and their compatibility with GPLv2 please read this: http://www.gnu.org/licenses/license-list.html – We know not all of you are lawyers, and thankfully that list makes it easy to check what licenses do and don't mesh. If something doesn't have a license, ask the author please, and don't assume.

The following code bases are popular (which is to say we see submissions with them pretty regularly), but at the time of this post, are not licensed GPL-compatible. None of this means you can't or shouldn't use this code on your sites or plugins, just that we can't host it *here* if you do.

- Adobe Air
- FancyBox v2 or later
- FancyZoom
- Font Awesome (**Edit**: Version 3.0 of this is now compatible)
- FLV Player
- Highcharts
- Highslide
- HTML 5 Music Player (Code Base Hero) (only pre version 1.0.1 – you can use this version)
- Imageflow
- Isotope
- JpGraph
- jquery Lightbox
- LightBox2
- MagicToolbox

Stripe Integration Part 9 – The Stripe Button

*Posted on December 28, 2012 by **Pippin** in **External APIs**, **Intermediate**, **Short Codes**, **Tutorials** | **No Comments***

In part 9 of this Stripe.com + WordPress tutorial series, we are going to look at using the Stripe button for accepting payments through our website. The Stripe checkout button creates a really slick, secure popup window that the customer enters their payment details into. This entry is part 9 of 9 in the Integrating [...]

A Layman's View of the WordPress User Roles

Michael Brown on Jan 6th 2013 0 Comments and 0 Reactions

The WordPress user feature could be confusing for some of us in the beginning. Therefore, to remain effective and efficient, it is paramount to understand the different roles that are available when creating users and defining their capabilities. There are different types of users in WordPress. WordPress offers default roles in the form of Administrator, Editor, Author, Contributor and Subscriber. You can also add a new user and assign him custom roles. The role defines a list of things that the person is allowed to do and is known as the capabilities of the role.
